innmobi

PRE-SEED · OCTOBER 2026

Every real-estate sale, from the first call to closing.

We are building AI modules for real-estate brokerages and developers in Mexico. The first works today: a voice assistant that answers, books the visit and says it is an AI in its first sentence.

Andrés Islas Bravo · Victor Varela

ventas@innmobi.ai

THE PROBLEM

Someone who asks about a home at night can go cold before anyone answers.

23%

of 2,241 US companies never responded to a web lead.

37%

responded within the first hour.

No public data for Mexico.

We will measure it in every pilot, against the client's own baseline.

Source: Harvard Business Review, 2011 (2,241 US companies, all industries).

THE BET

We are building the platform that carries every sale from first contact to after-sale.

Today AI answers and books visits. Next, modules that track every step and measure the team.

TRY IT TODAY

Call Valeria and hear what she does.

+1 915 745 7187

Speaks Mexican Spanish and says in her first sentence that she is an AI and this is a demo.

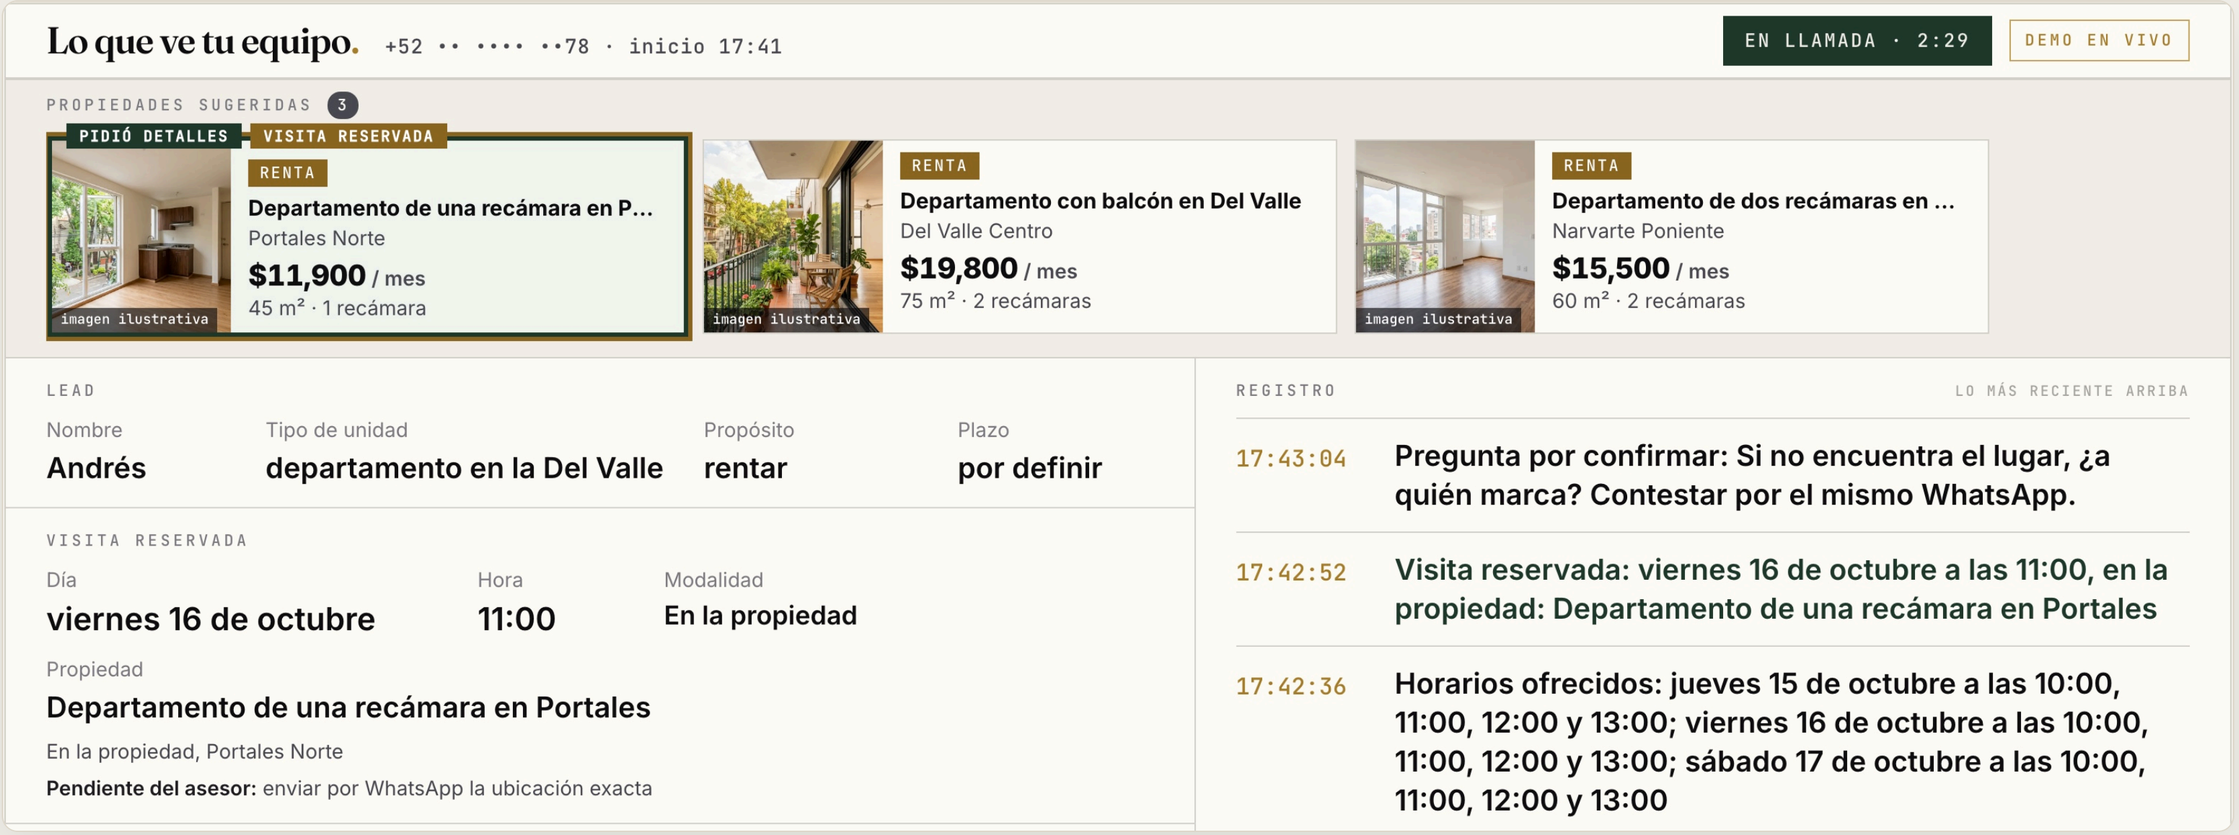

Searches 30 listings: presales, resales, bank foreclosures, rentals and land.

Books the visit in a real time slot and says an agent will send the location.

US demo line; a +52 55 number is pending approval. Fictional brokerage and listings.

WHAT YOUR TEAM SEES

The panel fills in while the person talks.

Real panel (in Spanish), demo call: fictional brokerage, listings and images.

THE PLATFORM

Independent modules: voice today, the whole sale next.

AI voice and panel

Answers, understands what the person wants and books the visit.

LIVE

Leads and calendar

Every contact, its history and the team’s visits.

NEXT

Deal pipeline

Offer, negotiation, contract and close, per agent.

EARLIER VERSION

Visit follow-up

The agent’s report and a client survey after the visit.

EARLIER VERSION

Team performance

Each agent, measured by client feedback and closed deals.

EARLIER VERSION

After-sale and paperwork

Deeds and follow-up of the paperwork with institutions.

EARLIER VERSION

Earlier version: used by a Mexico City brokerage (Feb–May 2026, per the founders); to be rebuilt for many clients.

THE STRATEGY

Voice opens the door; the platform keeps the business.

1 · LAND

Voice that books

A paid 30-day pilot: the AI answers and books visits.

2 · STAY

The system of record

Pipeline, visit follow-up and after-sale in one place.

3 · MEASURE

The team, with data

Each agent’s performance and reports for the owner.

Nothing is coded for a single client: a module joins the standard product when 3 of the first 5 clients use it.

Founders’ plan. For step 1, the demo line works today; no pilots are signed yet.

HOW IT WORKS

Code decides; the model talks.

Deterministic code

- Searches and filters the listings
- Real prices, availability and time slots
- Books the visit and logs every step

Language model and voice

- Natural Mexican Spanish
- Says it is an AI from the first sentence
- Designed to ask permission before using a budget and not to assess credit

We test changes with internal simulated calls; there is no external adversarial-testing report yet.

Model: Claude (Anthropic) · Voice: ElevenLabs · Telephony: Twilio. Simulations are internal, not customers.

WHERE WE ARE

What works today and what comes next.

Live in production

- Inbound voice line with AI disclosure
- Search and booking decided by code
- Live panel with a log of every step
- Google Cloud with 693 automated tests

What comes next

- Leads, calendar and pipeline
- Follow-up, performance and after-sale
- CRM connectors and WhatsApp
- Callbacks, after legal review
- First pilot with real leads

Status as of October 14, 2026, verified by the founding team; not an external audit.

MARKET

We start in Mexico City with developers and brokerages that pay for their leads.

IN PARALLEL

Developers

Active presales, paid leads and a sales room with three or more agents.

IN PARALLEL

Brokerages

Independent firms with 5 to 20 agents: resales, rentals and foreclosures.

LATER

More cities

Guadalajara, Monterrey and Latin America, if the pilots justify it.

Market size = active projects with paid leads × price per project. We count it with industry sources (Softec, Tinsa, ADI); we show no figure without a source.

Segments and expansion order: founders' hypothesis, to be validated with interviews and pilots.

BUSINESS MODEL

A paid 30-day pilot; then a subscription per module.

MXN 10,000

plus VAT, per project, invoiced. Offer: measurable promises and a pro-rata refund, subject to the pilot agreement.

After the pilot

- Voice per project: a monthly fee with included conversations and a spending cap
- Each extra module, once it is ready
- Visits confirmed by the sales room, measured every week

Excludes WhatsApp, cold calls and CRM integrations. No pilots signed yet.

TRACTION

In production, no revenue yet.

MXN 0

in revenue: no paying customers yet.

Feb–May 2026

use of an earlier version, a CRM with voice, by a Mexico City brokerage, per the founders; no numbers, no reference.

0

pilots signed as of October 15, 2026. Current offer: MXN 10,000 + VAT per project.

Live

demo line in production: anyone can call it today.

Revenue: MXN 0 as of October 15, 2026. Earlier version: per the founders, no reference.

COMPETITION

There are text bots and CRMs; we want to join voice with the whole sale.

Category	Examples	Focus
Text and WhatsApp	Cliengo, Leadsales, Kommo	Chat, capture and messaging CRM
CRMs and portals	EasyBroker, Tokko, Inmuebles24	Inventory and lead management
AI voice	Dapta; Morada.ai (Brazil); EliseAI (US)	General voice, or housing in other countries

Our focus: independent modules, from the voice that books the visit (today) to the after-sale (to be built), with AI disclosure and a record of every step.

Public company information, not tested by us. We do not claim there are no other competitors.

TEAM

Two founders: one builds, one sells.

PRODUCT AND ENGINEERING

Andrés Islas Bravo

Ex-Scale AI. Robotics and industrial automation. Built and runs the voice platform you can call today.

SALES AND PILOTS

Victor Varela

AI developer with relationships in Mexico City real estate. Runs sales and pilot operations.

⚠ Today one engineer carries the platform. The round adds a second; meanwhile, external technical review and a runbook.

Team as stated by the founders. The company is not yet incorporated.

THE ROUND

We are raising a pre-seed to go from demo to paying projects.

PRE-SEED · PRELIMINARY

US$250–500K

SAFE or convertible note. We incorporate before signing.

0–3 months	Up to three paid pilots, with developers and brokerages.
3–9 months	Leads, calendar and pipeline for many clients; a second engineer.
9–15 months	Follow-up, performance and after-sale; a seed round if the numbers support it.

Use of funds: platform engineering, legal compliance, voice and telephony, and pilot support.

Preliminary amount, confirmed with the 15-month budget. Applying to Y Combinator W27. No commitments yet.
